DESCRIPTION

The ChoiceSpine™ Octane ® M Spinal Implant is an intervertebral body fusion device constructed of medical grade Polyetheretherketone (PEEK) as described by ASTM F2026. The implant incorporates ridges on the endplates to enhance bone ingrowth.

CONTRAINDICATIONS

Contraindications include, but are not limited to:

• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
• active pregnancy;
• cardiovascular complications;
• rapid joint disease, bone absorption, osteopenia, and/or osteoporosis (osteoporosis is a relative contraindication);
• grossly distorted anatomy due to congenital abnormalities;
• any patient having inadequate tissue coverage over the operative site or where there is inadequate bone stock, bone quality, or anatomical definition;
