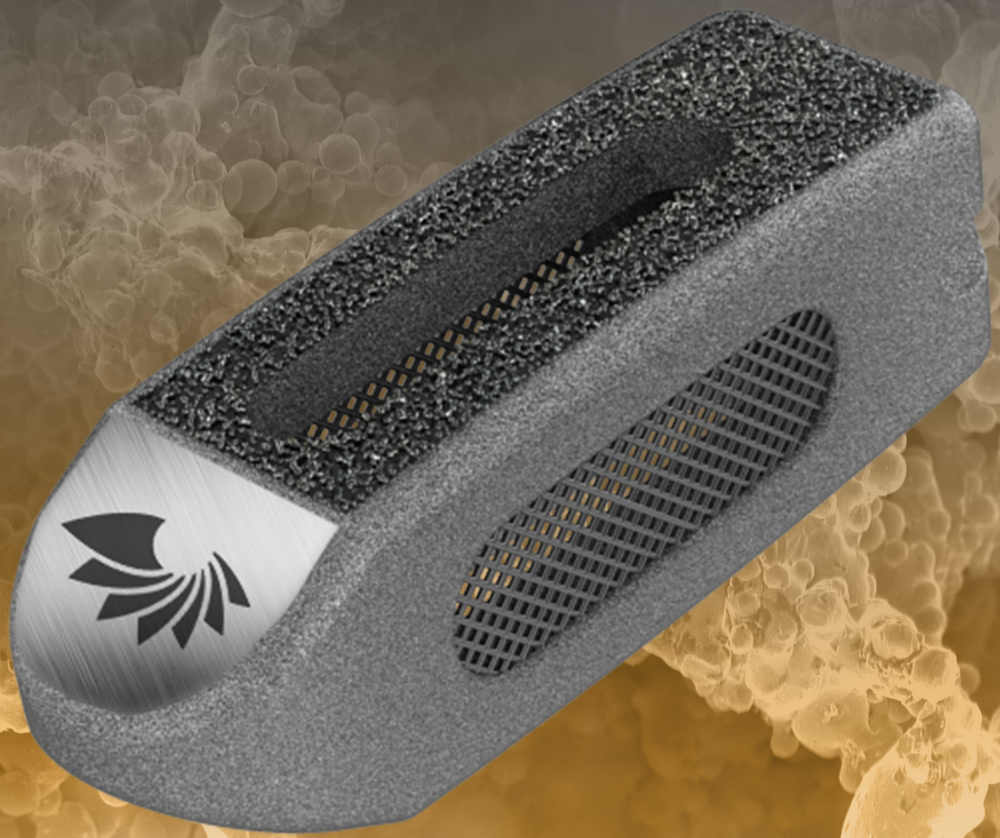
TIGER SHARK™

3D Printed Porous Titanium Interbody Fusion System



With Biobond™ 3D Printed Titanium Porous Organic Structure

TIGER SHARK™

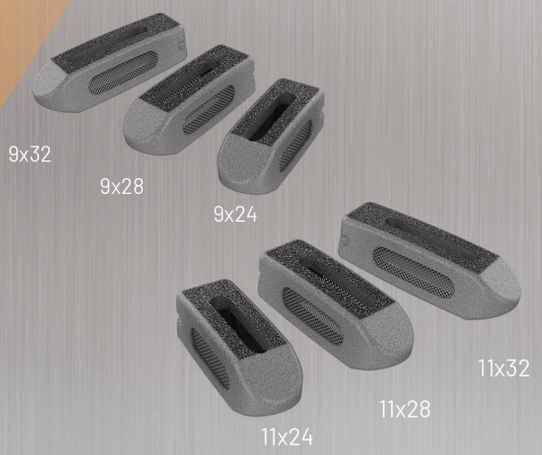
3D Printed Porous Titanium Interbody System

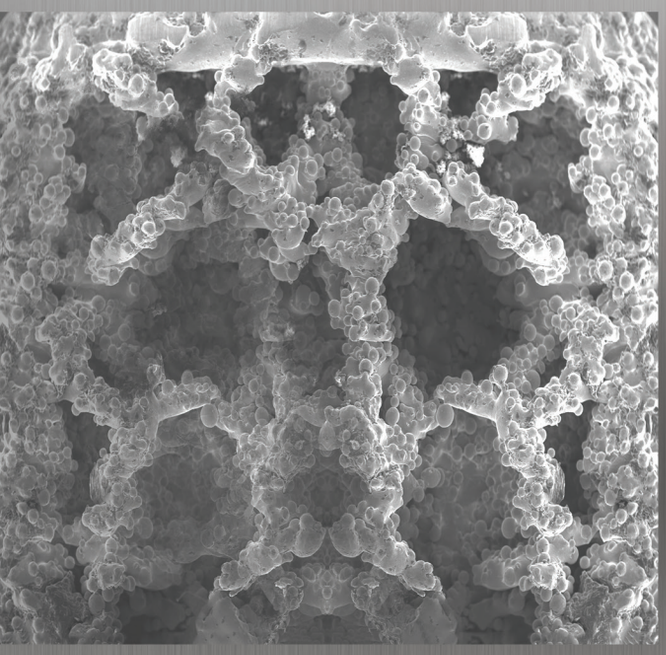
Tiger Shark is a 3D manufactured titanium alloy interbody created with a proprietary organic porous structure called BioBond™. Along with the BioBond porous structure, Tiger Shark contains a generous graft window and a smooth bullet shape distal surface for fast insertion and maximum bone ingrowth surface. Tiger Shark is available in an assortment of anatomic footprints and can accommodate posterior and transforaminal placement.

System Features

- BioBond 3D printed titanium matrix to enhance bone growth and fusion
- Built in 6° lordosis
- Various heights: 9-18mm in 1mm increments (9W footprint)
- Various heights: 9-16mm in 1mm increments (11W footprint)
- Large center opening for packing bone graft material
- Surgeon friendly instrumentation to simplify the procedure

Variety of Footprints





BioBond 3D Porous Structure
